

DRVS UDS Validation Checklist – Table 6b Tobacco

Unmapped but Available Data

In the DRVS Mapping Administration, check for unmapped source EHR values for the below mapping categories.

- Structured Clinical Data – Smoking Status
- Structured Clinical Data – Smoking Cessation
- Structured Clinical Data – Tobacco Status
- Structured Clinical Data – Tobacco Cessation
- Structured Clinical Data – Hospice Care
- Service Line – Primary Care

Unknown or Unavailable Data

All of the above Structured Clinical Data items could have multiple sources in your EHR. If you do not see “Source EHR Text” corresponding to each possible workflow for a given data point, open a ticket with a patient example at support@azarahealthcare.com to have it mapped.

Questionable Data

The “Questionable Values” measures can help you identify issues where-in results are not being correctly captured by DRVS or documented by staff:

- Tobacco Status - Questionable
